

IVH Monthly News

Volume 2, Issue 8

August

Check out our website to see what we've been up to this summer!

Fun and Facts:

- An elephant can smell water from three miles away
- Sharks are the only known creature never afflicted with cancer
- The Poison Arrow frog has enough poison stored in it to harm 2,200 people at one go
- Giraffes give birth standing, so the first thing a baby giraffe experiences in this world is a 6ft plummet to the ground. Thanks Mom!
- Schedule an appointment or put in a prescription refill request on our website at idahovethospital.com

Nampa Dog Park Opens

Thank you to all of our clients that donated to the construction of the Nampa Dog Park. It is now up and running after over a year of hard work from many parties. We hope you and your pet will enjoy many adventures at the new park!

Attack of the Algae

A lot of us like to take our pets for a swim or a jog down by Lake Lowell, but there is an enemy we all need to be aware of. It doesn't walk, it doesn't talk and it's not human, but it can cause some disastrous problems for you and your pet. The Blue-Green Algae that grows by Lake Lowell is very harmful if ingested or comes in contact with the skin of pets and people. In humans it can cause flu like symptoms, trouble breathing and skin irritation and could potentially kill your pet. It is best to refrain from swimming near these areas and do your best to keep your pet from drinking the water. If you are concerned your pet has come into contact with this algae, contact us immediately. Enjoy the summer!

Proxy Rx

Idaho Veterinary Hospital is now able to ship many medications and most food for your pet right to your front door for little to no extra cost. Even if we do not carry the medication, there is a good chance we can still ship it to you for close to, if not less than what you would pay online. And with Proxy Rx, you have the Doctors confidence standing behind you. Ask our receptionists about how Proxy Rx can help save you time and money.
